Please take the following steps to connect your Macintosh (Apple) laptop to the LCD Projector:

The following item must be signed out at the front desk:

VGA Combination Cord

MacBook Adapter to VGA Cord

Figure 1 – adapter for Macbook models (Pre 2010)

Figure 2 – adapter for Macbook models (Post 2010)
Locate the **Media Input Panel**.

Plug the **VGA Combo Cord** into the respective ports.

Connect the other end of the **VGA Cord** to the **MacBook Adapter to VGA Cord**.

Note: the adapter shown on the left is for Macbook models from 2010 onwards. See Figure 1 for a picture of the adapter for the older models.
Connect MacBook Adapter to laptop.

Turn on your computer

Locate the Media Control Panel and Turn ON the display function and press the laptop button light

The ON button will flash until LCD Projector is on.

Lower the volume by turning the dial counter clockwise. This volume dial is strictly for the laptop.

*Once these steps are executed, the laptop should automatically be mirrored with the LCD Projector.
Use the light panel to control the lighting and brightness of the room. Please turn off all lights at the end of the event.

After using the LCD projector, Turn Off the display function

RETURN ALL BORROWED EQUIPMENT TO THE FRONT DESK
If the Macbook does not automatically mirror with the LCD Projector

Click on the Apple Logo (top left hand corner) and click on System Preference

Click on Display icon.

Select Arrangements and click on Mirror Displays
